

## General Chemistry

Length of Course: Full Year

Elective/Required: Required

Credit Value: 5 Credits

Date Approved:

Written: Hala Morcos

<b>Title of Unit</b>	Introduction to chemistry	<b>Grade Level</b>	10 <sup>th</sup> -12 <sup>th</sup> grade
<b>Curriculum Area</b>	unit I	<b>Time Frame</b>	10 days
<b>Developed By</b>	Ms. Hala Morcos		
<b>Identify Desired Results (Stage 1)</b>			
<b>Content Standards</b>			
<p>HS-PS1-1. Use the periodic table as a model to predict the relative properties of elements based on the patterns of electrons in the outermost energy level of atoms</p> <p>HS-PS1-3. Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale to infer the strength of electrical forces between particles.</p> <p>HS-PS2-6. Communicate scientific and technical information about why the molecular-level structure is important in the functioning of designed materials.*</p>			
<b>Understandings</b>		<b>Essential Questions</b>	
Overarching Understanding		Overarching	Topical

**Students will be able to:**

- Understand the scientific process and the need for practicing safe procedures while conducting science investigations
- Compare and contrast pure and applied chemistry
- Identify reasons to study chemistry
- Explain the different branches of chemistry
- Identify the steps and problem-solving in scientific method
- Identify properties of matter
- Differentiate between the states of matter
- Compare and contrast physical and chemical changes
- Distinguish between homogeneous and heterogeneous mixtures
- Describe how mixtures can be separated
- Compare and contrast elements and compounds
- Apply the law of the conservation of mass
- Identify SI units of measurements
- Perform unit conversion
- Perform mathematical operations involving scientific figures
- Summarize the five essential points of Dalton's atomic theory
- Analyze the discovery of the subatomic particles

- How can atomic models be used to describe and explain the structure of atoms?
- How do the properties of matter change as phases change?
- How are solutions formed?
- How can the structure of matter be used to explain the different types of reactions?
- How can the law of conservation of mass be demonstrated in chemistry?

- How do structures and properties of materials determine their use?
- How have different contributions made by scientists from diverse culture enhanced our knowledge in chemistry?
- How can the structure of matter be used to explain the different types of reactions?
- What is the role of mathematics in chemistry?

**Related Misconceptions**

<p>Homogeneous solutions and heterogeneous solutions are similar</p> <p>mixtures and compounds are the same</p> <p>elements and compounds are different</p> <p>the distinctions between mixtures and compounds</p> <p>physical changes and physical properties are the same</p> <p>chemical changes and chemical properties are the same</p>		
<b>Knowledge</b> Students will know...	<b>Skills</b> Students will be able to...	

<ul style="list-style-type: none"><li>• How to determine what chemistry is and its scope, and its effect on everyday life and society.</li><li>• How to apply the scientific process.</li><li>• Synthesize and apply basic safety procedures and identify basic equipment.</li><li>• Analyze and use appropriate units of measurement and the sources and implications of uncertainty in measurements.</li><li>• How to use the SI units and how to convert among units</li></ul>	<ul style="list-style-type: none"><li>• Analyze How is the scientific method used to solve problems in chemistry?, as they work on class work , lab report of solve any word problems</li><li>• Determine how chemists apply as to create and collect data analysis; as well as using other resources to come up with conclusion relating to the concept. Create the various components of matter using technology in chemistry.</li><li>• Classify matter according to its composition, structure and behavior</li><li>• Distinguish between homogeneous mixtures and heterogeneous mixtures</li><li>• Develop and use models to relate properties of matter to its structure</li><li>• Distinguish between chemical and physical properties of matter</li><li>• Contrast physical and chemical changes</li><li>• Apply the law of conservation of matter to chemical changes</li></ul>

<ul style="list-style-type: none"><li>• Distinguish between physical and chemical properties.</li><li>• Contrast physical and chemical changes.</li><li>• Calculate the density of a substance from experimental data.</li><li>• Differentiate between physically blended and chemically bonded.</li><li>• Distinguish between accuracy and precision, and directly and inversely proportional relationships</li><li>• Using mini lab -virtue lab to enforce the physical and chemical Properties and changes.</li></ul>	<ul style="list-style-type: none"><li>• The student will demonstrate the ability to explain how matter may be identified, classified, and changed</li><li>• The student will demonstrate the ability to summarize and apply the Law of Conservation of Matter and Energy.</li><li>• Distinguish between qualitative and quantitative observations</li><li>• Compare and apply strategies for solving Density problems in Chemistry</li></ul>	

Assessment Evidence (Stage 2)

Performance Task Description

- Goal
- Role
- Audience
- Situation
- Product/  
Performance
- Standards

- Chapter Assessment Unit 2
- Journal rubric using it as an exit ticket
- Formal Laboratory Report rubric
- Word Problem Rubric
- Graphing Rubric, Portfolio Rubric, Prompt Rubric, Open-ended Questions Rubrics, Computer Simulation Conclusion Rubric, Laboratory accuracy rubric (advanced),
- Research Project Rubric, Construction Project Rubric on the atom structure, uses in today's technology and medical uses, time line of element discoveries,
- Projects -Atomic model using assigned element, the Time Line of developments of the atomic theory, comparison between the various scientists and the developments of the atomic theory and modern model of the element. ,Poster Rubric, Oral Presentation Rubric, and power point ,Class Participation Rubric
- Class work and Mini-lab Rubric
- Quizzes and exams
- Do now's or starting topic (as a problem, open question or an activity using activity worksheet) with groups elaborations (with each student has a part of this activity to work on it), than discuss it with in the class

Other Evidence

- Using word problems to solve various Density problem , using both open response and algebraic equation to solve for volume, mass, and density written response to several of the essential questions
- Write responses to various open ended questions (e.g. how to calculate the density of irregular shape object) write the procedure for water displacement.
- Write a series of journal entries (e.g. Exit ticket write the steps of calculating density of regular shape, vs. density of irregular shape objects)
- Write conclusion as students compare their hypothesis to the analytical data and observations.
- Quizzes on terms/concepts concerning the trend of the periodic table, and elements locations and its properties

Conduct a unit test covers various aspects of the periodic table developments (e.g. vocabulary, open response, fill in, and multiple choice)

**Using internet resources to promote learning such as <http://www.chemistry.org/>.  
<http://www.nsc.org/library/chemical/index.htm>**

- **Conservation of Matter using water and seltzer tablets, calculating isotopes using m & m, Line Emission Spectra**

- |   |  |
|---|--|

<ul style="list-style-type: none"> <li>• <b>Goal</b></li> <li>• <b>Role</b></li> <li>• <b>Audience</b></li> <li>• <b>Situation</b></li> <li>• <b>Product/ Performance</b></li> <li>• <b>Standards</b></li> </ul>	<p>Unit Tests unit 3</p> <p>Mini - quizzes, isotopes, model of atoms, Dalton theory, atomic structure and calculating isotopes.</p> <p>Formal Lab reports</p> <p>Timeline of the developments of the modern model of the atom projects,</p> <p>Projects will include in the oral Presentations, power point and poster boards</p> <p>Activity worksheet with class participation both individual and groups discussions</p> <p>Do now's</p> <p>Exit tickets Journals and portfolios.</p>
--	--

### Other Evidence

- Oral and/or written response to several of the essential questions (e.g., “how the historical development of the periodic tables?) Using various evidence and theories.
- Write responses to various open ended questions as part of the class participation and open discussions
- Write a series of journal entries (e.g., compare the hypotheses to conclusion the trend of the elements in the periodic table.)
- Present visual presentation showing the timeline of the atomic developments with various theories justice process
- Quizzes on terms/concepts concerning the trend of the periodic table, and elements locations and its properties
- Conduct a unit test covers various aspects of the periodic table developments (e.g. vocabulary, open response, fill in, and multiple choice)

### Learning Plan (Stage 3)

- Where are your students headed? Where have they been? How will you make sure the students know where they are going?
  - How will you hook students at the beginning of the unit?
  - What events will help students experience and explore the big idea and questions in the unit? How will you equip them with needed skills and knowledge?
  - How will you cause students to reflect and rethink? How will you guide them in rehearsing, revising, and refining their work?
  - How will you help students to exhibit and self-evaluate their growing skills, knowledge, and understanding throughout the unit?
  - How will you tailor and otherwise personalize the learning plan to optimize the engagement and effectiveness of ALL students, without compromising the goals of the unit?
  - How will you organize and sequence the learning activities to optimize the engagement and achievement of ALL students?
- Teacher and students will scrutinize Dalton's atomic theory.
  - Teacher and students will scrutinize the discovery of the different subatomic particles, as being assigned part of DO Now's.
  - Students, in groups, will complete a worksheet about subatomic particles. (FA- Teacher circulates to check all students' answers).
  - Students will go over students' work class participations.
  - Teacher and students will scrutinize Rutherford's Nuclear Model of the atom. Project on group and individual of the timeline between
  - Students, in groups, will complete a worksheet about nuclear model of the atom
  - The lab activities will be distributed throughout the learning process
  - To clarify all misconceptions students will work on lab activity, either video, virtue giving an element and create individual distance from the nucleus to the first of orbit.
  - Students using "both Measurements and periodic table to design an element." The ATOMIC STRUCTURE LAB.
  - Students Project "compare Rutherford model of the atom vs. Bohr and modern model of the element."
  - Students will complete the exit ticket through open response as they compare and contrast between various subatomic particles and its locations. How do the different subatomic particles compare from the point of

## Understanding by Design Unit Template

Title of Unit	<u>Chemical reactions and equations</u>	Grade Level	10 <sup>th</sup> -12 <sup>th</sup> grade
Curriculum Area	Unit 6	Time Frame	25 days
Developed By	Ms. Hala Morcos		

### Identify Desired Results (Stage 1)

**Content Standards**

Associated Disciplinary Core Ideas (DCIs) from NGSS include:

**PS1: Matter and Its Interactions**

**PS1.B—Chemical Reactions**

*Connections to other DCIs in this grade-band:*

**HS.PS3.A** (HS-PS1-8); **HS.PS3.B** (HS-PS1-8); **HS.PS3.C** (HS-PS1-8); **HS.PS3.D** (HS-PS1-8); **HS.LS1.C** (HS-PS1-1); **HS.ESS1.A** (HS-PS1-8); **HS.ESS1.C** (HS-PS1-8); **HS.ESS2.C** (HS-PS1-3)

**HSN-Q.A.1**

Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays. (HS-PS1-2), (HS-PS1-4), (HS-PS1-5), (HS-PS1-7)

Understandings	Essential Questions

(e.g. vocabulary, open response, fill in, and multiple choice)</li></ul>
---

### Learning Plan (Stage 3)

- Where are your students headed? Where have they been? How will you make sure the students know where they are going?
- How will you hook students at the beginning of the unit?
- What events will help students experience and explore the big idea and questions in the unit? How will you equip them with needed skills and knowledge?
- How will you cause students to reflect and rethink? How will you guide them in rehearsing, revising, and refining their work?
- How will you help students to exhibit and self-evaluate their growing skills, knowledge, and understanding throughout the unit?
- How will you tailor and otherwise personalize the learning plan to optimize the engagement and effectiveness of ALL students, without compromising the goals of the unit?
- How will you organize and sequence the learning activities to optimize the engagement and achievement of ALL students?

1. Read class objective and answer the following questions using your own words:  
1. what are you going to learn today  
2. Why is important to learn it?  
3. How will you show you have learned it?
2. Teacher and students will discuss students' answers.

#### Lab: "The Periodic Table"

3. Teacher will explain to students the objective of this lab.
4. Students will write their hypothesis for this lab.
5. Teacher will explain the procedures for this lab.
6. Students in groups of three will do the lab and record their observations.
7. Teacher will supervise their work, answer questions and correct mistakes or inadequate procedures.
8. How is the modern periodic table organized? What information does the group provides about the element's atomic structure? What information does the period provide about the element's atomic structure? Teacher and students will go over students' work.
9. Teacher and students will investigate the relationship between groups, and valence electrons and Lewis dot diagram.
10. students will classify, and characterize elements as metals, non-metals, and metalloids.
11. Students, in a project, will scrutinize, compare, and contrast the physical and chemical properties of metals, non-metals, and metalloids.
12. Students will complete their exit ticket.
